

Hello Bob, I am sending you 3 pictures of my Gas Struts for my doors. I bought them thru Strutwise.com in Canada. I received them and went straight to the machine shop to fabricate the bottom pieces that bolt the strut to frame of vehicle. I made the pieces a little longer so that I can cut off what I don't need. I drilled and tapped them.

Here it's drilled and tapped. Ready for measuring and then I will cut to fit and weld to frame.

I can't wait for glass to get here!!! So I can hurry up and finish the doors...I already have the hinges, struts, glass c-channels, switches, replays...etc. Only waiting on glass. I spoke with Jeanine, and the door glass is pretty close to our diabolic measurements. And the 1/4 glass is also close. But the diabolic is missing an air vent on the 1/4 glass that the real car has. So I will also be ordering the 1/4 glass I will make the air vent so that glass fits better. And windshield, I am going to hold on, because the measurements are too off. I need to think about the windshield.
