

Here is a Quick Peek at my engine bay. All I'm missing is the heat shield barriers and the cosmetic pieces all that is last.

But as you can see I also replicated a X-Pipe Exhaust system from a Aftermarket exhaust made for Lamborghini. Flow Tested and works Amazing! Works exactly like it should. 1 side acts like a vacuum when other side of engine is in firing. It's cool!

Also if you look on the left side of engine I made the Air intake filter on the outside of engine bay, so that it always brings in Cold Fresh air.

Engine is fully wired and complete. I'm only waiting on 1 part it's currently at the machine shop.

Then I can start the engine up and take it for a test drive before paint & body.

(Transaxle not installed in this picture.)
