

Hello, I will soon be sending more progress pictures...i am starting to bond together the doors this weekend. Glass / regulators are installed.. I wanted mine to look like the 2002 model. For fiberglass to bond good, you have to dig all the way down till you see fiberglass. Then you are ready to seal up the gap. *Nothing bonds to the top surface of gel coat.

Tape off area of work, to minimize the mess and easier to clean up.

Next week I receive the rear grill. I will also be cutting out the center section to replicate original 2002 model.

The yellow lambo here is for reference only
