

Pic #13 Slightly modified X-brace for Body strengthening after rocker reinforcements are welded in.

Pic #14 Rockers all welded and ready for more cutting and welding.

Pic #15 This cute little tool will allow you to spend at least 20 hours a day trying to correct 0.2 of a degree. It does come in handy for some of the angles though.

Pic #16 X-brace partially installed

Pic #17 Body has been centered on floor jig and welded solid utilizing the rear cradle mounts on the firewall. Cadillac cradle has been centered and aligned to the rear wheel centerline. It is spaced 5½" ground clearance. Now comes the fun of building the tube framework.
