

Need a sweater out there??? I painted my Diabolic 6.0 white and I had to move it outside my garage to sweep the floor and wouldn't you know it, it started to snow and now I can't find it?????!!!!!! – Yep, typical with Michigan weather !!

Pic #24 - Finally, the rear suspension is close to completion.

Pic #25 - Time for a change of pace. I started to turn some nylon down for my hubcaps for my Gallardo wheels.

Pic #26 - They took some work but I like the outcome.

Pic #27 - Back to working on the "beast". I modified the left front and right front upper spring perch per instructions from HT Motorsports (Held Suspension) and then installed the Wide Track coil-over suspension on the left side.

Pic #28 - This picture shows the right front side suspension installed. The HT Motorsports Wide Track Kit is fairly easy to install. Taking off the old a-frames can be tricky. Safety first kids.
