

Pic 070 This is the cable retaining bracket welded on the rear of the shifter assembly.

Pic 071 Another picture of the shift cable retainer slot in the rear mounted bracket.

Pic 072 Here is the hole that I cut in the tunnel floor for the shifter with the rear cable. I am using a rear mounted fuel tank so there is plenty of area under the tunnel.

Pic 073 Shown is the shifter installed temporarily until console gets fitted. (shifter is taped to prevent damage, duh)
