

Scotty G. - Diabolic 6.0 Build

Scotty does the cutting of the frame and cradle.

Scotty G's stretched cradle with clean paint job. Great work for someone that this was the first attempt.

Masking tape that marked the line to cut the chassis, just like the instructions in B and B Customs article.

Rear of chassis/frame has been cut and removed.

Scotty chose the Mitsubishi style gas cap for his Diabolic.

New bushings were purchased to replace the worn ones in the Fiero donor.
